AUTOMATIC SEAT BELTS

MODELS OVERLEAF

The following points should be noted when handling and demonstrating automatic seat belts.

1. When first unpacked from its carton, the reel will probably be locked. This is due to movement of the reel in transit.
To unlock, place the assembly on a flat surface. Pull webbing gently and the reel will then unlock.
2. The reel is only sensitive to sharp deceleration of the vehicle or when the reel is tipped to an angle of approximately 45° . **IT WILL NOT LOCK EXCEPT UNDER THESE CONDITIONS.**
3. After installing in a vehicle, check that the reel will lock when subjected to hard braking or sharp cornering. To unlock the reel apply slight forward body pressure against the belt and release by rearward movement of the body.
4. Always ensure the reel is mounted in the car on a level plane. The use of a spirit level is recommended along the length and width of the mounting, after ascertaining of course that the vehicle itself is on a level surface.
5. In no circumstances remove end covers to inspect the reel.

P.T.O.
